General Description

The products listed above are micro-PLC+HMIs, rugged programmable logic controllers that comprise built-in operating panels.

Detailed Installation Guides containing the I/O wiring diagrams for these models, technical specifications, and additional documentation are located in the Technical Library in the Unitronics website: https://unitronicsplc.com/support-technical-library/

Alert Symbols and General Restrictions

When any of the following symbols appear, read the associated information carefully.

<table>
<thead>

- Before using this product, the user must read and understand this document.
- All examples and diagrams are intended to aid understanding, and do not guarantee operation. Unitronics accepts no responsibility for actual use of this product based on these examples.
- Please dispose of this product according to local and national standards and regulations.
- Only qualified service personnel should open this device or carry out repairs.

- Failure to comply with appropriate safety guidelines can cause severe injury or property damage.
- Do not attempt to use this device with parameters that exceed permissible levels.
- To avoid damaging the system, do not connect/disconnect the device when power is on.

Environmental Considerations

- Do not install in areas with: excessive or conductive dust, corrosive or flammable gas, moisture or rain, excessive heat, regular impact shocks or excessive vibration, in accordance with the standards given in the product’s technical specification sheet.
- Do not place in water or let water leak onto the unit.
- Do not allow debris to fall inside the unit during installation.

- Ventilation: 10mm space required between controller’s top/bottom edges & enclosure walls.
- Install at maximum distance from high-voltage cables and power equipment.
Mounting

Note that figures are for illustrative purposes only.

Dimensions

* * Note that for JZ20-J modules those dimensions are 7.5 mm (0.295”).

<table>

<tbody>
<tr>
<td>JZ20-xxx\JZ20-J-xxx</td>
<td>117 x 89mm (4.606”x 3.504”)</td>
<td>66 x 19.2mm (2.598”x 0.755”)</td>
</tr>
</tbody>
</table>

Add-on modules-
Available by separate order for communication and cloning.

Note: the USB port and an Add-on module cannot be physically connected at the same time.

Add-on: during installation
Installing an Add-on module requires sufficient clearance space

USB Port
This may be used for programming purposes.

Add-on: after installation

DIN-rail mounting
Snap PLC onto the DIN rail

Panel mounting
Note: Removing the unit requires clearance space. Recommendation: approximately 40mm (1.58”)
## Wiring

- Do not touch live wires.

- This equipment is designed to operate only in SELV/PELV/Class 2/Limited Power environments.
- All power supplies in the system must include double insulation. Power supply outputs must be rated as SELV/PELV/Class 2/Limited Power.
- Do not connect either the 'Neutral' or 'Line' signal of the 110/220VAC to device’s 0V pin.
- All wiring activities should be performed while power is OFF.
- Use over-current protection, such as a fuse or circuit breaker, to avoid excessive currents into the power supply connection point.
- Unused points should not be connected (unless otherwise specified). Ignoring this directive may damage the device.
- Double-check all wiring before turning on the power supply.

### Caution

- To avoid damaging the wire, do not exceed a maximum torque of:
  - Controllers offering a terminal block with pitch of 5mm: 0.5 N·m (5 kgf·cm).
  - Controllers offering a terminal block with pitch of 3.81mm: 0.2 N·m (2 kgf·cm).
- Do not use tin, solder, or any substance on stripped wire that might cause the wire strand to break.
- Install at maximum distance from high-voltage cables and power equipment.

## Wiring Procedure

Use crimp terminals for wiring;
- Controllers offering a terminal block with pitch of 5mm: 26-12 AWG wire (0.13 mm² – 3.31 mm²).
- Controllers offering a terminal block with pitch of 3.81mm: 26-16 AWG wire (0.13 mm² – 1.31 mm²).
1. Strip the wire to a length of 7±0.5mm (0.270 – 0.300”).
2. Unscrew the terminal to its widest position before inserting a wire.
3. Insert the wire completely into the terminal to ensure a proper connection.
4. Tighten enough to keep the wire from pulling free.

## Wiring Guidelines

- Use separate wiring ducts for each of the following groups:
  - Group 1: Low voltage I/O and supply lines, communication lines.
  - Group 2: High voltage Lines, Low voltage noisy lines like motor driver outputs.
  - Separate these groups by at least 10cm (4”). If this is not possible, cross the ducts at a 90° angle.
- For proper system operation, all 0V points in the system should be connected to the system 0V supply rail.
- Product-specific documentation must be fully read and understood before performing any wiring.
  - Allow for voltage drop and noise interference with input lines used over an extended distance.
  - Use wire that is properly sized for the load.

## Earthing the product

To maximize system performance, avoid electromagnetic interference as follows:
- Use a metal cabinet.
- Connect the 0V and functional ground points (if exist) directly to the earth ground of the system.
- Use the shortest, less than 1m (3.3 ft.) and thickest, 2.08mm² (14AWG) min, wires possible.
UL Compliance

The following section is relevant to Unitronics’ products that are listed with the UL.
The following models: JZ20-R10, JZ20-J-R10, JZ20-R16, JZ20-J-R16, JZ20-J-R16HS, JZ20-R31,
are UL listed for Ordinary Location.

UL Ordinary Location
In order to meet the UL ordinary location standard, panel-mount this device on the flat surface of Type 1
or 4X enclosures.

Panel-Mounting
For programmable controllers that can be mounted also on panel, in order to meet the UL Haz Loc
standard, panel-mount this device on the flat surface of Type 1 or Type 4X enclosures.

Communication and Removable Memory Storage
When products comprise either USB communication port, SD card slot, or both, neither
the SD card slot nor the USB port are intended to be permanently connected, while the USB port is
intended for programming only.

Removing / Replacing the battery
When a product has been installed with a battery, do not remove or replace the battery unless the
power has been switched off, or the area is known to be non-hazardous.
Please note that it is recommended to back up all data retained in RAM, in order to avoid losing data
when changing the battery while the power is switched off. Date and time information will also need to
be reset after the procedure.

UL des zones ordinaires:
Pour respecter la norme UL des zones ordinaires, monter l'appareil sur une surface plane de type de
protection 1 ou 4X

Montage de l'écran:
Pour les automates programmables qui peuvent aussi être monté sur l'écran,
pour pouvoir être au standard UL, l'écran doit être monté dans un coffret avec une surface plane de
type 1 ou de type 4X.

Communication et de stockage amovible de mémoire (carte mémoire)
Produits comprend un port USB de communication, soit un port carte SD ou les deux, ni le port SD, ni
le port USB ne sont censés être utilisés en permanence, tandis que l'USB est destiné à la
programmation uniquement.

Retrait / Remplacement de la batterie
Lorsqu'un produit a été installé avec une batterie, retirez et remplacez la batterie seulement si
l'alimentation est éteinte ou si l'environnement n’est pas dangereux.

Veuillez noter qu'il est recommandé de sauvegarder toutes les données conservées dans la RAM, afin
d'éviter de perdre des données lors du changement de la batterie lorsque l'alimentation est coupée. Les
informations sur la date et l'heure devront également être réinitialisées après la procédure.
Inputs

This model comprises a total of 20 inputs in 3 groups.

1. I0 to I15 are digital inputs. They may be wired, in a group, as either npn or pnp.

2. I16 and I17 may be wired as either digital or analog inputs. These may be wired as either:
   - npn digital inputs
   - pnp digital inputs
   - analog (voltage) inputs

   In addition, 1 input may be wired as a pnp input, while the other is wired as an analog input.
   Note that if 1 input is wired as an npn input, the other may not be wired as an analog input.

3. AN0 and AN1 are analog (current) inputs that may be wired using 2, 3, or 4 wires.

Digital Inputs, Controller’s Power Supply

**Note:** The inputs are arranged in two groups. You can wire one group as npn and the other as pnp, or wire both groups as npn, or as pnp. In either case, the npn/pnp pins **must be connected.**

![Input wiring, npn (sink)](image1.png)

![Input wiring, pnp (source)](image2.png)

![Input wiring (I0-I15), pnp (source), (I16-I17), npn (sink)](image3.png)
Digital Outputs

Increasing contact life span
To increase the life span of your contacts and protect the unit from potential damage by reverse-EMF, connect:

- A clamping diode in parallel with each inductive DC load
- An RC snubber circuit in parallel with each inductive AC load

Analog inputs
Note: Shields should be connected at the signal source.

Analog Input wiring, current (AN0-AN1)
2 or 3-wire

4-wire
Analog Input wiring, voltage (AN2-AN3)

Note: If either I16 or I17 is wired as an npn digital input, the remaining input may not be wired as an analog input.

Technical Specifications

Battery

Back-up

7 years typical at 25°C, battery back-up for RTC and system data, including variable data.

Digital Inputs

Number of inputs       18 (two groups) – see Notes 2 & 3
Input type             pnp (source) or npn (sink)
Galvanic isolation     None
Nominal input voltage  24VDC
Input voltage
  pnp (source)         0-5VDC for Logic ‘0’
                        17-28.8VDC for Logic ‘1’
  npn (sink)           17-28.8VDC for Logic ‘0’
                        0-5VDC for Logic ‘1’
I0-I15                 I16-I17
Input current          3.7mA@24VDC     1.2mA@24VDC
Response time          10mSec typical  20mSec typical
Input cable length     Up to 100 meters, unshielded
High speed inputs      Specifications below apply when wired as H.S.C. See Note 4.
Resolution 16-bit  
Frequency 10kHz maximum  
Minimum pulse width 40μs

**Notes:**

2. Inputs I0-I15 are arranged in a single group. Via wiring, the entire group may be set to either pnp or npn.

3. I16 & I17 may be wired as either digital or analog inputs, as shown in the product’s installation guide. I16 & I17 may be wired as npn, pnp, or 0-10V analog inputs. 1 input may be wired as pnp, while the other is wired as analog. If 1 input is wired as npn, the other may **not** be wired as analog.

4. I0 and I1 can each function as either a high-speed counter or as a normal digital input. When used as a normal digital input, normal input specifications apply.

**Digital Outputs**

<table>
<thead>
<tr>
<th>Number of outputs</th>
<th>11 relay (in two groups) – See Note 5</th>
</tr>
</thead>
<tbody>
<tr>
<td>Output type</td>
<td>SPST-NO (Form A)</td>

<td>30mA, 28.8V</td>
</tr>
</tbody>
</table>

Galvanic isolation None  
Conversion method Successive approximation  
Resolution 10 or 12-bit (0 to 4095) (Via Software)  
Conversion time All analog inputs are updated every 8 PLC scans, regardless of how many inputs are actually configured.  
Precision ± 2%  
Status indication Yes – if an analog input deviates above the permissible range, its value will be 4096.  
Input cable length Up to 30 meters, shielded twisted pair

### Notes:

6. The JZ20 built-in USB port may be used for programming. Add-on Modules are available by separate order for communication and cloning. Note that the USB port and an Add-on module cannot be physically connected at the same time.

7. Add-on module JZ-PRG, with 6-wires communication cable (supplied in PRG kit – see the JZ-PRG Installation Guide) can be used:
   - for programming
   - to connect a modem

8. Add-on module JZ-RS4 (RS232/485), with a standard 4-wire communication cable can be used:
   - for programming
   - to communicate with other devices (including modems/GSM)
   - for RS485 networking.
9. Add-on module MJ20-ET1 enables communication over 100 Mbit/s TCP/IP network:
   - Programming/data exchange with Unitronics software;
   - Data exchange via MODBUS TCP as Master or Slave.

**Miscellaneous**

Clock (RTC)  Real-time clock functions (date and time).
